

DC DRUM CUTTER

Your choice for rock or concrete wall and surface profiling, trenching, frozen soil or rock excavation and demolition.

Atlas Copco

Drum Cutters are your economic solution when conventional excavation methods are insufficient and percussion systems are inadequate to achieve your desired result.

Our Drum Cutters are an excellent choice for rock or concrete wall and surface profiling, trenching, frozen soil excavation, soft rock excavation in quarries, demolition, and dredging.

They can be **used underwater to a depth of 30 m** without additional installation.

Due to small grain sizes, cut rock or concrete can be **used as back-fill material** without additional crushing.

Low noise and vibration levels make our Drum Cutters suitable for use on restricted jobsites and in sensitive urban areas.

Applications for Drum Cutters

Bucket

Drum cutter

Hydraulic breaker

The drum cutting technology used allows **accurate removal of material** in tunnels and trenches, and from any other kind of rock or concrete surface.

The productivity of our Drum Cutters depends on various factors, including the material type and specific parameters, such as compressive strength, fracture characteristics, carrier type and settings, and the overall operating conditions.

The chart illustrates the productivity per model size dependent on the uniaxial compressive strength.

A high torque hydraulic motor transmits power through robust spur gears to the drive shaft to rotate the lubrication-free cutter drums. While the cutter drums are pressed against suitable rock or concrete, the picks will penetrate and remove material through a

combination of crushing and cutting action. The optimized spiral pick pattern, with sufficient spacing between each individual pick, allows the picks to share the work and ensures that the material is removed evenly from the surface to be cut.

The wear-resistant tungsten carbide tip is brazed into a heat-treated steel body to withstand extreme stresses and impact.

Various retaining systems ensure that picks are locked into the pick boxes.

High torque gear motor for higher productivity and motor lifetime

Mechanical 360° rotatable upper part with central fixing bolt for easy positioning of drum cutter

Sturdy spur gears for optimum energy transmission and minimum service

Cutter drum with optimized pick pattern for higher productivity

Robust housing design with HARDOX wear protection for higher uptime

High load resistant output shaft bearing system with lubrication-free slide ring seal system

Technical data		DC 200	DC 400	DC 600	DC 1000	DC 1200	DC 2000
Carrier weight class ¹	t	1–3	3–8	8–15	10–18	15–25	20–35
Service weight ²	kg	200	400	600	1,000	1,200	2,000
Weight without adapter plate	kg	150	310	470	820	980	1,750

COMMITTED TO SUSTAINABLE PRODUCTIVITY

We stand by our responsibilities towards our customers,
towards the environment and the people around us.
We make performance stand the test of time.
This is what we call – Sustainable Productivity.
